***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8,10-12 and 17-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 8, the angle being between 100-180 contradicts claim 7 which states that the angle is between 10 and 75 degrees.

In claims 10-12,24,25 and 27, the use of preferably is indefinite. The term "preferably" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

In claim 17, the phrase "means of traction" is indefinite, in that it is unclear if the applicant intends to invoke 112 6<sup>th</sup>. It fails to follow the conventional "means for" language. Additionally, the "means for cutting" is indefinite, in that the claimed means, according to the specification is not a means to cut, rather it is a means for allowing cutting.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,5,6,13,15 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Bullard-2199690.

Bullard discloses an implant in fig. 4 having a rectangular support body 11 from which emanates 2 anterior straps 13, two posterior straps 12 and two middle straps positioned between the anterior and posterior straps. Each of the pair of straps has a strap, lying on one side of a sagittal plane or axis.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

Art Unit: 3731

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3,4,7,8,9,10,11,12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bullard-'690.

Bullard discloses the invention as claimed with the exception of the specific lengths of the straps and the angles between the straps. Given that the Bullard device is for a facemask, the length of the straps exceeding 4-5 in. would have been an obvious modification in order to allow for proper tensioning of the mask around an average size head. As for the claimed angle ranges, it appears as if the angles between the pair of anterior or posterior straps are close to 90 degrees. Therefore, the examiner contends that widening the angle would have been a mere obvious design choice giving that the applicant failed to provide any criticality for these angles, failed to disclose the angles being for any particular purpose or to solve a problem, and the examiner contends that the prior art angles would have performed equally as well.

***Allowable Subject Matter***

Claims 30-34 are allowed.

Claims 17-29 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
